## EXPERIENCE

---

### Viasat

Software Engineer

San Diego, CA

August 2018 - January 2024

- Improved compliance with rigorous security standards in cross-virtual machine communications by designing and owning a C++ library that managed **OpenSSL**-secured **DTLS** connections.
  - Prioritized developer convenience with robust API, allowing easy setup of encryption, timeout, SSL roles, and peer addresses, abstracting away complexities of the underlying implementation.
  - Enhanced connection stability by integrating multi-threading for heartbeat monitoring, facilitating automatic re-establishment of SSL connections as required for continuous operation.
  - Boosted efficiency and throughput by employing a multi-threaded approach to queue and send packets, optimizing network performance and data handling.
- Enabled fault diagnosis & system reliability with C++ library that created files detailing recent activity from failed **Docker/Kubernetes** containers, enabling more precise troubleshooting and system insights.
  - Optimized log management using circular buffers for priority-based storage, implemented **multi-threading**, and established **IPC**-based communication to coordinate across multiple containers.
- Enhanced alerting and monitoring by developing data publishing microservice that streamed critical data from containers leveraging **gRPC** for transmission, **Fluent Bit** for filtering and enrichment, **Kafka** for publication.
  - Improved communication efficiency by developing a C++ client library with auto-generated **gRPC** sources, simplifying client initialization, request creation, and stub method invocations.
  - Optimized data processing workflows using **Fluent Bit** for advanced filtering/enrichment, leading to efficient, content-based routing and improved data stream management with Stream Processor.
- Significantly reduced application suite build/test times by **>3 hours** through proposing, planning, and leading an intern project focused on process optimization and efficiency in a containerized build environment.
  - Effectively managed and mentored participants, providing guidance through the project's technical and operational complexities, ensuring successful project completion and a valuable learning experiences.
- Boosted team velocity by 25% over three-year tenure as **Scrum Master** for 8-member team by streamlining **JIRA** workflows, and fostering cross-team collaboration, while also excelling in primary developer role.
- **Deployed**, debugged and administered **Linux-based VMs** using **Jenkins** to develop, test, and deploy **Docker/Kubernetes** containers.
- Accelerated code review completions and development quality by revitalizing processes and training, fostering clear communication, faster issue resolution, and increased team knowledge.
- Lowered dependency on individual expertise by initiating peer education program, conducting needs assessments, mobilizing subject matter experts, and creating a comprehensive video knowledge base.
- Deep intellectual curiosity and passion about learning through **methodical study**, **organized note-taking** using **Zettelkasten** method, systematic reviews using **spaced repetition flashcards**.

### Viasat

Software Engineer Intern

San Diego, CA

June 2017 - August 2017

- Created equipment tests using C++, automated tests and reporting of results using **Python**, ensuring seamless communication and compatibility between devices.

### United States Navy

Information Systems Technician

2007 - 2012

- Configured, maintained, and monitored ship-wide **local-area network** including **servers**, **firewalls**, **routers**, and **switches**.

## EDUCATION

---

### University of California San Diego

BS in Computer Science

## CERTIFICATES

---

- C++ Certified Entry-Level Programmer, C++ Institute - 2024
